

Aquarius

P2P Foreign Exchange at Mid-market Rates

Our target market - foreign exchange

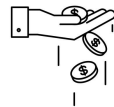

The problem: Middlemen - between every foreign exchange transaction

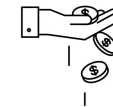

Currency exchange want

Exchange broker / dealer

Payment provider

What's left

Size of the problem as represented in dollars

* If we apply a .4% fee from Wise

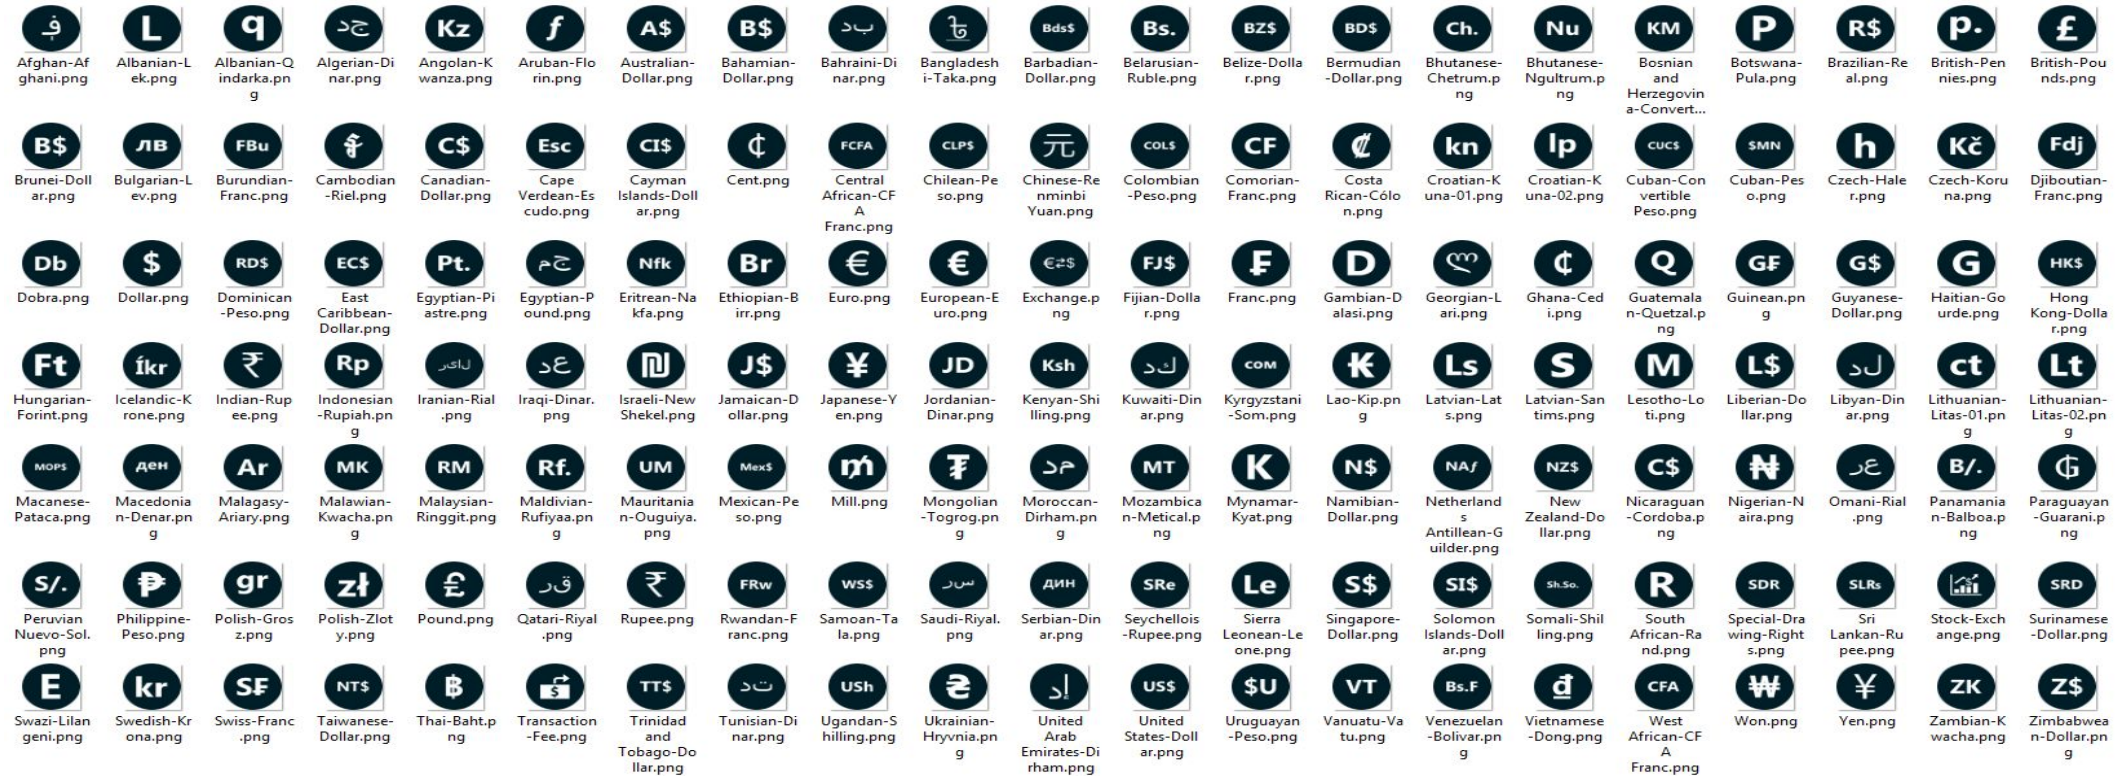

**If we apply a 1.5% fee from banks or credit card companies

***If we apply a 6.4% remittance fee (World Bank)

Solution: No Middlemen - exchange currencies directly P2P at mid-market rates

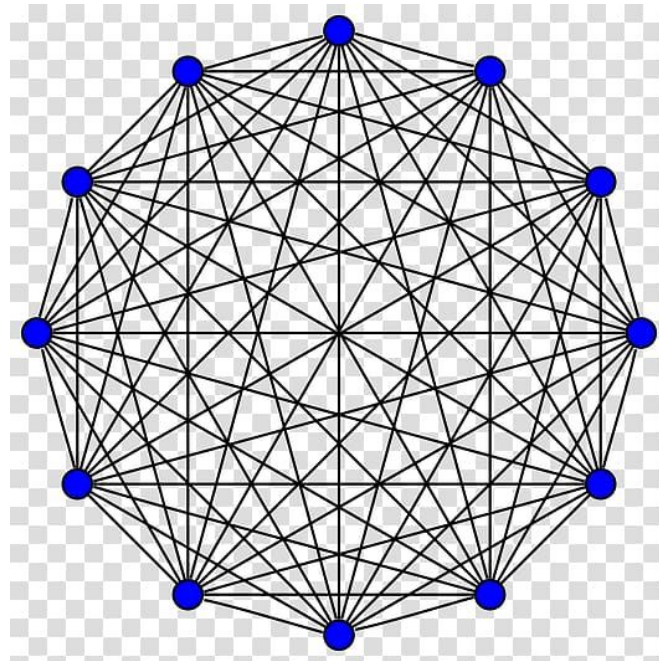

The P2P foreign exchange problem: “coincidence of wants”- too many possible P2P foreign exchange combinations to align and match

Our solution makes direct foreign exchange P2P possible

Aquarius deploys a unique reactive AI implied matching algorithm that solves the coincidence of wants problem

Aquarius makes direct foreign exchange P2P possible without the need for middlemen by using unique algorithms to find and match every combination of currency exchange wants / needs through mathematical implication as if only one currency pair exists.

Example: How it works - **buy** / **sell**

$$\text{€} / \text{\$} = \text{€} / \text{\$} = \text{P2P foreign exchange}$$

The Aquarius implied algorithm also finds this path

$$\text{€} / \text{\$} = \text{¥} / \text{€}, \text{¥} / \text{£}, \text{\$} / \text{£} = \text{€} / \text{\$} = \text{P2 'N' P foreign exchange}$$

... and countless more

Aquarius' competition and their respective fees

Aquarius Opportunity

Our Fee - 10 basis, as applied to the existing foreign exchange marketplace

Aquarius ... P2P Foreign Exchange at Mid-market rates
